

Tyscor V/VS suction systems

Progress starts with ideas. Leader in the innovation of dental suction systems for more than half a century.

You can find further information here.

Operational reliability with two suction stages**

Class IIa certified medical device according to MDR (EU 2017/745)

Upgrade capability thanks to Tyscor Tandem Flex

Modular layout, option of converting from a dry to a wet suction system

Integrated control system makes for quick and easy plug & play installation

Tyscor Tandem Flex

Scalability at all levels:

Upgrading existing devices instead of replacing them reduces investment costs and eliminates the need to install a second suction stage to the suction unit. Tyscor Tandem Flex makes it easy to supplement an existing suction unit. This makes your suction system suited to your growing practice.

VistaSoft Monitor

Future-proof networking:

VistaSoft Monitor is used to monitor the operating status, to permanently ensure functioning, and for signalling to your (mobile) end device or by email. Whether by PC or mobile phone – you always keep a clear overview of your practice.

Up to 75% energy saving potential through the use of a radial compressor*

The radial technology of the Tyscor V and Tyscor VS units delivers outstanding performance, particularly in terms of energy consumption. Its load-dependent automatic adjustment provides constant suction at all times – and saves money in the process.
